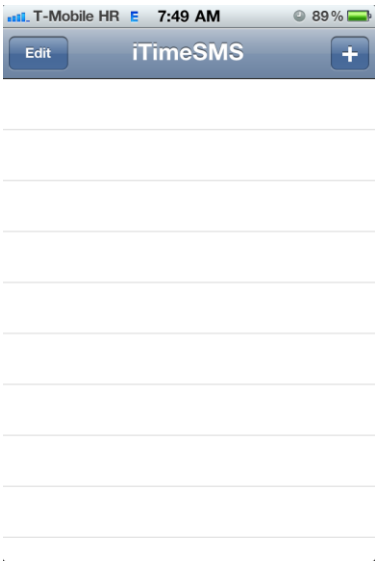
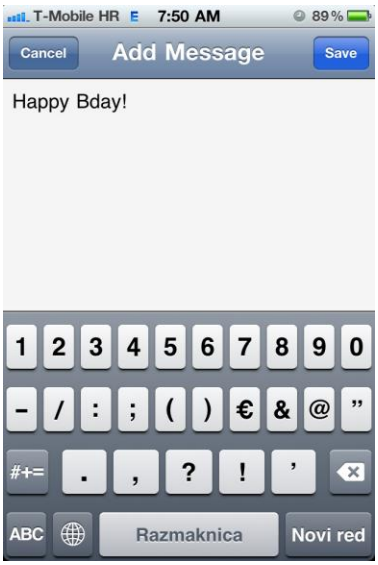
iTimeSMS for iPhone

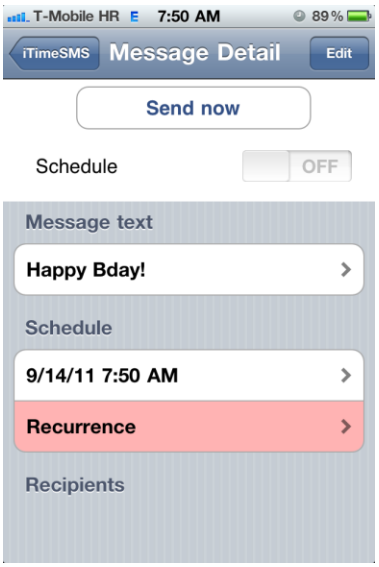
This is the main screen in iTimeSMS where is your list of self-made templates.
To create a new template press "+"

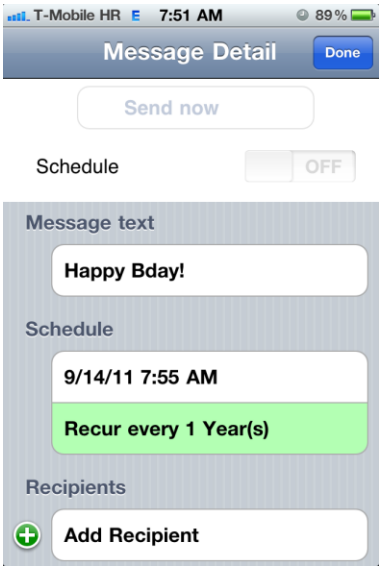


Enter your template and save it.
(in this example we'll show you how to set-up **Birthday greeting iTimeSMS reminder**)



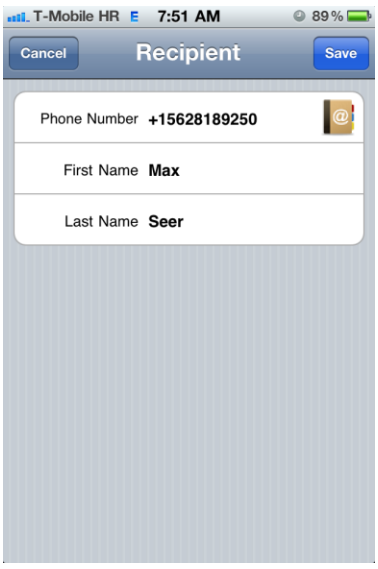
After the template is saved, you'll be taken to Schedule screen.
Set date & time that you want to be reminded at and set Recurrence to 1 year.



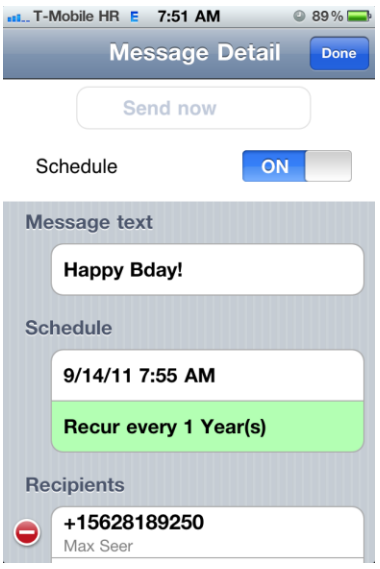


Now Recurrence is set and it will show you, recur period.
Tap Edit button to Add Recipient.

You can choose Recipient from your Contacts or add the number manually. Save it after you're done.



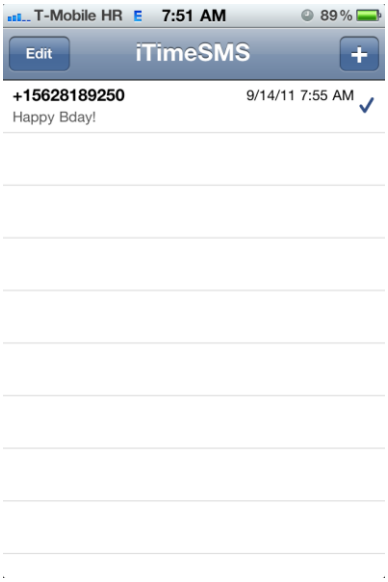
Now tap Done button and Edit button afterwards to turn on the Schedule button.



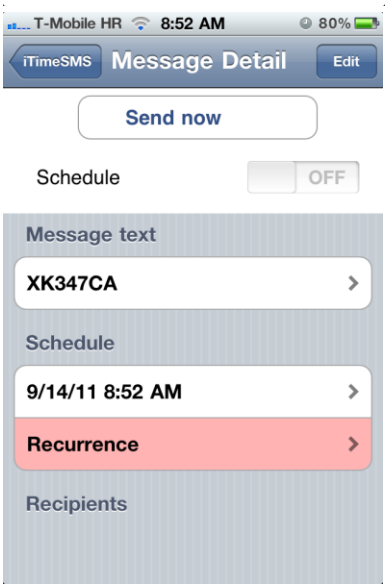
When you have set the Schedule button to ON, you can safely exit iTimeSMS. If you go back onto Main screen you will see a blue check mark on an active template.

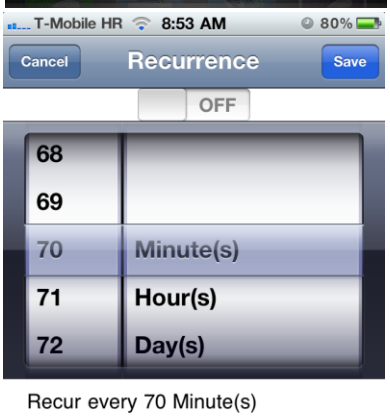
Reminder will pop out at preset schedule.
Now you can choose whether to Close (Cancel) the text message or Send Msg to send it!

And You're done! Forget no more!



Recurrence set (in this example we are setting up **parking recur schedule**)
After you've entered registration plate template tap Recurrence and set the recurrence duration. (We've set to 70 minutes because usually there is 15 minute period of allowed free park time)

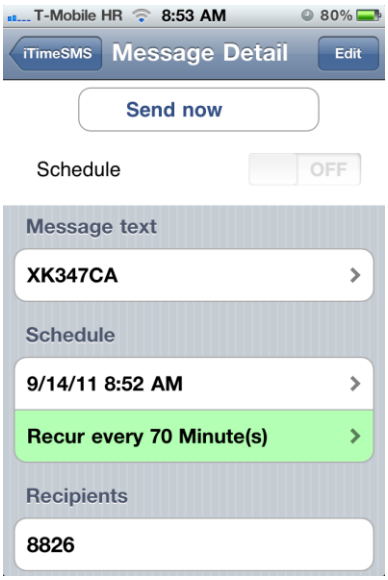


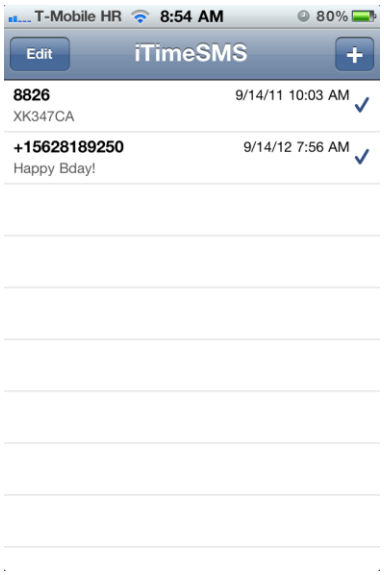


Recur every 70 Minute(s)

Now template and recurrence is set and when you drive into parking space just open that template and tap the Send now button. After the message is sent, Schedule will be automatically turned ON.
NOTE: There is no need to manually set the Schedule button to ON if you are using Send now button and you send the message.

As you can see in the main screen, schedule ON mark is set and time of next reminder is visible.
When the next reminder pops out, if you need more parking time you will choose to send a new message, if not when you cancel the message in Messages app Schedule will be automatically set to OFF!





NOTE: You can use iTimeSMS also for text message templates only, with or without pre-enterded Recipient(s).
